

Azoospermia – Hope for Hopeless

Dr. Brijesh P. Vaidya
M.D (Hom.)

Assistant Professor in Department of Physiology
C.D.Pachchigar Homoeopathic college Surat.

Azoospermia is medical condition where semen is lack of sperm. Its really very important issue regards male infertility. In this topic I will give certain highlight about causative factors and scope of homeopathic medicine.

Azoospermia can cause by multiple factors. Physician must evaluate proper case and detail history of patient's life style because there simple cause which can directly or indirectly affects spermatogenesis (production of sperm). We can categorized in two broad categories. First obstructive cause and second is non-obstructive cause. In obstructive cause means to say sperm productive is normal BUT here pathway or travel of sperm to ejaculatory duct have certain pathology.

Obstructions occur most commonly in

Epididymis: The coiled tube on the back of each testicle where sperm matures

Vas deferens: The tube that transports sperm from the epididymis

Ejaculatory duct: The tube from which the sperm exit into the urethra and mix with fluid to form semen certain cause are following :

- Trauma or injury to these areas.
- Infections., Varicocele
- Inflammation.
- Previous surgeries in the pelvic area
- Development of a cyst.
- Vasectomy

Non obstructive are more significant than obstructive cause. There are multifactorial cause to fail to develop sperm.

- Inherited genetic history of abnormal genes
- Certain environment factors like alcohol, smoking etc
- Hormonal imbalance
- Certain drug history or allergic hyperimmune response which can destroy testicular barrier
- Certain metabolic disease like diabetes or endocrine glands diseases or TB etc.
- Tumors or cancer of testis, bad effect of radiation or chemotherapy
- Deficiency of important micronutrient which necessary of spermatogenesis

Azoospermia – Hope for Hopeless

- History STDs, viral infection like mumps

Azoospermia is social stigma. It will directly or indirectly affect the person social life specially newly married couple. As per our discussion we can find causative factor which can prevent spermatogenesis. Our homeopathic medicine have wonderful role in this condition. After the proper diagnosis you go through case detail and prescribe our medicine.

Diagnosis of Azoospermia :

- Semen analysis
- Detail medical history & physical examination
- Hormones screening
- Genetic study & antibody study
- Genital tract imaging: uses ultrasound, MRI or CT scan.

Our homoeopathic medicine have wonderful role in production of sperm specially in non-obstructive cause. We can thoroughly investigate the case and find similimum is ideal. Constitutional remedy almost works in most of cases. Here I will draw focus on certain important medicine for Azoospermia.

Following few Homeopathic medicine is prescribe when symptoms corresponds :

1. **Agnus Castus** : Diminution of sexual power.-The penis is small and flaccid; so relaxed that voluptuous fancies excite no erection.-Feeble erections without sexual desire.-The testicles are cold, swollen, hard, and painful.-Impotence, with gleet (esp. with those who have frequently had gonorrhoea).-Gleet, without sexual desire or erections.-Emission of prostatic fluid when straining at stool; during micturition.-Drawing along the spermatic cords.-Pollutions from irritable weakness with prostatorrhoea.-Itching of the genital organs.-Yellow discharges from the urethra.-Gonorrhoea, with suppressed sexual desire.
2. **Caladium** : Organs swollen (puffy), relaxed, and sweating.-Swelling of margin of prepuce with smarting during micturition.-After waking prepuce remains retracted; painful and swollen.-After coition the prepuce remains behind the glans; it is painful and swollen.-Glans red, dry; dotted with still redder points.-Glans flabby from masturbation.-Painful erections without sexual desire, alternating with sexual desire with relaxed penis.-Impotence with mental depression.-Frequent nocturnal emissions.-Nocturnal emissions either without dreams or with non-sexual dreams.-Imperfect erections and premature ejaculation of the semen.-Impotence; the penis remains relaxed, even when excited.-Feeling of coldness, and cold perspiration of the sexual organs.
3. **Lycopodium** : Shooting, drawing, and incisive pain in the glans.-Bastard gonorrhoea, with a deep red and smarting pustule behind the glans.-Excoriation between scrotum and thighs.-Dropsical swelling of genital organs.-Immoderate excitement, or absence of sexual desire.-Repugnance to coition, or disposition to be too easily excited to it.-Impotence of long standing.-Weakness or total absence of erections.-Penis small, cold, relaxed.-Itching of the internal surface of the prepuce.-Excessive pollutions, or absence of pollutions.-Emission too speedy or too tardy during coition.-Falling asleep during coition.-Lassitude, after coition or pollutions.-Flow of prostatic fluid, without an erection.
4. **Phosphoricum Acidum** : Lancinating pains in glans.-Fine pricking at point of penis.-Burning cutting in glans with an out-pressing pain in both groins.-A feeling of heaviness in glans, esp.

Azoospermia – Hope for Hopeless

when urinating.-Tingling and oozing vesicles round fraenum.-Sycotic excrescences with heat and burning.-Crop of warts on prepuce.-A crop of pedunculated warts come round corolla glandis after taking Pho. ac. in summer drinks ,Condylomata.-Eruption on penis and scrotum.- Inflammatory swelling of scrotum.-Pain in testes when touched.-Gnawing pain in testes.- Swelling of testes (l.) while spermatic cord is enlarged, hard, and tightened.-Absence of sexual desire.-Frequent erections (in morning in bed; in morning when standing), without desire for coition.-Weakness of sexual organs, with onanism, and little sexual desire.-Exhaustion after coition.- Discharge of semen when straining during an evacuation.

5. **Salix Nigra** : Weakness of Sexual Organs, Premature Ejaculation, it works as sexual tonic as well as increased spermatogenesis. Involuntary discharge of semen without orgasm or erection (eg in sleep, urine etc).Testis painful on moving.
6. **Yohimbinum** : it is another more specific medicine for impotence and azoospermia. In the morning strong and lasting erections without increase of desire.-Sexual neurasthenia, with impotence, is relieved.-Enlargement of testicles and epididymis. Priapism.
7. **Damiana** : Said to be of use in sexual neurasthenia; impotency. Sexual debility from nervous prostration. Incontinence of old people. It is also work as sexual tonic in male. Generally it is prescribe in mother tincture form.
8. **Bufo** : Involuntary emissions; too quick ejaculation; impotence.-bad effect of Masturbation.
